

Lower Cost. Higher Value.

The Bag Sampler delivers high performance and significant cost savings

Up to 75% lower
maintenance costs

Up to 90% lower
consumable cost
(no petri dishes, no cups)

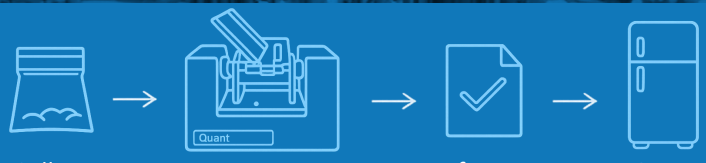
Up to 90% less
time spent on sample handling

Up to 60% lower
total cost of ownership
over a 10-year lifetime

Unique Plastic Bag Sampling - Simple, Safe, Smart

Revolutionize your sampling workflow with direct-in-bag analysis:

- **Workflow steps:**



- **No sample transfer: No cups, dishes, or extra handling**
- **Safer sampling: No burns from hot products**
- **Representative results: Analyze a larger sample volume (improved Theory Of Sampling)**
- **Break-proof sampling: Flexible bags eliminate the risk of broken glass or rigid plastic**

No cleaning between samples

Proven Performance

The Quant and Bag Sampler deliver high analytical performance with a simple, efficient workflow. Designed for challenging, high-variability products, the system analyzes hot, sticky, and heterogeneous samples directly from production and deliver high analytical performance equal or better than competitors.
The Bag Sampler comes with calibration models for cream cheese, processed cheese and yellow cheese.

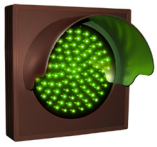
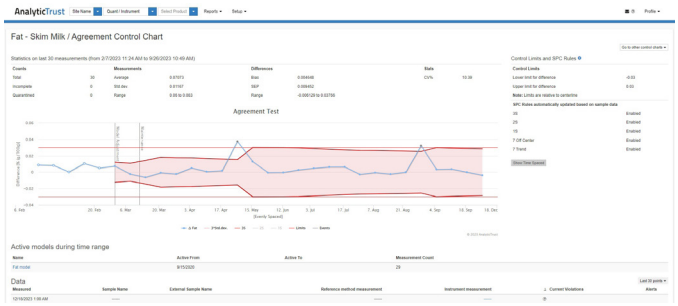
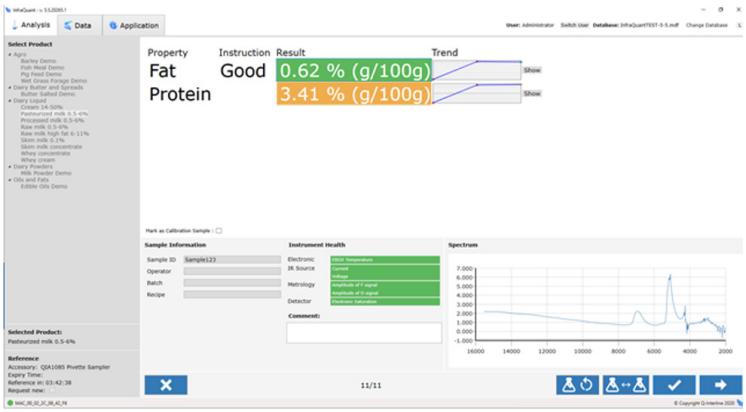
Fast Start, Zero Calibration Barriers



With free calibration data, rapid startup modeling, and no hidden costs for model libraries, Q-Interline helps you achieve results from day one. Full access to raw Quantum data gives you complete flexibility to develop, optimize, and future-proof your analytical workflows as your business grows.





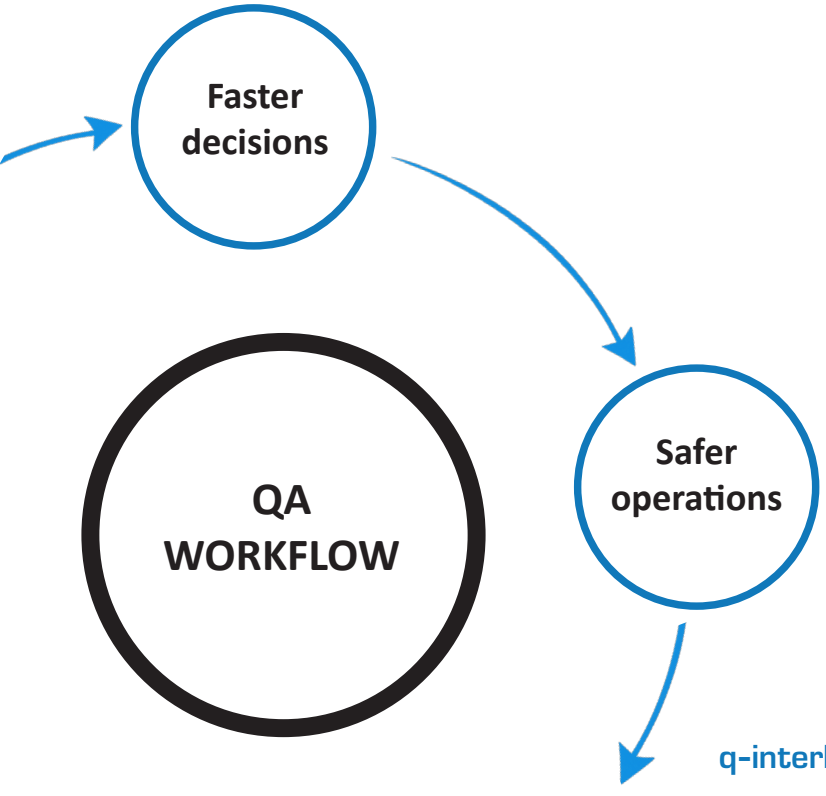
Get up and running faster than ever

- Free calibration data for customized models
- Rapid startup modeling tailored to your products
- No hidden costs - all model libraries included
- Full access to raw “Quantum” data for complete flexibility

Compatible with the world’s leading surveillance software

Take control of your entire analytical ecosystem:

- **Centralized storage for all calibration data and models**
- **Real-time monitoring of instrument performance and accuracy**
- **Network-wide visibility of all instruments from one platform**
- **Enhanced support through centralized diagnostics and insights**



More Than Just Analysis

This isn’t just NIR analysis — it’s a complete transformation of your QA workflow.

By combining fast FT-NIR technology with smart sampling solutions, you can streamline daily operations, reduce manual handling, and gain immediate access to reliable quality data.

The result?

- Faster decisions
- Safer operations
- Better data
- Lower costs

All while improving consistency, reducing waste, and giving your team more time to focus on what really matters.
